CONTENTS OF VOLUME 105

NUMBER 1, AUGUST 1990

KIYOMI FUKUSHIMA, MASAYUKI ARAI, YOSHIRO KOHNO, TOSHIO SUWA, AND TETSUO SATOH. An Epoxysuccinic Acid Derivative(Loxistatin)-Induced Hepatic Injury in Rats and Hamsters 1

H. J. SEIDEL, R. BADER, L. WEBER, AND E. BARTHEL. The Influence of Ethanol on the Stem Cell Toxicity of Benzene in Mice 13

H. G. SHERTZER, M. SAINSBURY, AND M. L. BERGER. Importance of Protein Thiols during *N*-Methyl-*N'*-nitro-*N*-nitrosoguanidine Toxicity in Primary Rat Hepatocytes 19

N. I. KERKVLIET, L. B. STEPPAN, J. A. BRAUNER, J. A. DEYO, M. C. HENDERSON, R. S. TOMAR, AND D. R. BUHLER. Influence of the Ah Locus on the Humoral Immunotoxicity of 2,3,7,8-Tetrachlorodibenzo-*p*-dioxin: Evidence for Ah-Receptor-Dependent and Ah-Receptor-Independent Mechanisms of Immunosuppression 26

RICHARD H. REITZ, PATRICK S. MCCROSKEY, COLIN N. PARK, MELVIN E. ANDERSEN, AND MICHAEL L. GARGAS. Development of a Physiologically Based Pharmacokinetic Model for Risk Assessment with 1,4-Dioxane 37

MELANIE A. BANKS, DALE W. PORTER, WILLIAM G. MARTIN, AND VINCENT CASTRANOVA. Effects of *in Vitro* Ozone Exposure on Peroxidative Damage, Membrane Leakage, and Taurine Content of Rat Alveolar Macrophages 55

TOSHIKI WATANABE, KUNIO MATSUHASHI, AND SATOSHI TAKAYAMA. Placental and Blood–Brain Barrier Transfer following Prenatal and Postnatal Exposures to Neuroactive Drugs: Relationship with Partition Coefficient and Behavioral Teratogenesis 66

ROBERT C. BOOKSTAFF, FREJA KAMEL, ROBERT W. MOORE, DONALD L. BJERKE, AND RICHARD E. PETERSON. Altered Regulation of Pituitary Gonadotropin-Releasing Hormone (GnRH) Receptor Number and Pituitary Responsiveness to GnRH in 2,3,7,8-Tetrachlorodibenzo-*p*-dioxin-Treated Male Rats 78

MICHAEL R. BLEAVINS AND DANIEL DZIEDZIC. An Immunofluorescence Study of T and B Lymphocytes in Ozone-Induced Pulmonary Lesions in the Mouse 93

GREGORY M. HIGGINS AND ROBERT W. GARDIER. γ-Aminobutyric Acid Antagonism Produced by an Organophosphate-Containing Combustion Product 103

TIMOTHY W. ROBISON, ALEX SEVANIAN, AND HENRY JAY FORMAN. Inhibition of Arachidonic Acid Release by Nordihydroguaiaretic Acid and Its Antioxidant Action in Rat Alveolar Macrophages and Chinese Hamster Lung Fibroblasts 113

K. M. CROFTON, K. F. DEAN, M. G. MÉNACHE, AND R. JANSSEN. Trimethyltin Effects on Auditory Function and Cochlear Morphology 123

LAURENCE D. FECHTER AND LYNN CARLISLE. Auditory Dysfunction and Cochlear Vascular Injury following Trimethyltin Exposure in the Guinea Pig 133

J. G. VOS, A. DE KLERK, E. I. KRAJNC, H. VAN LOVEREN, AND J. ROZING. Immunotoxicity of Bis(tri-*n*-butyltin)oxide in the Rat: Effects on Thymus-Dependent Immunity and on Nonspecific Resistance following Long-Term Exposure in Young versus Aged Rats 144

PATRICK J. WIER, RICHARD K. MILLER, DEV MAULIK, AND P. ANTHONY DI SANT'AGNESE. Toxicity of Cadmium in the Perfused Human Placenta 156

AWARDS 172

ACKNOWLEDGMENT 179

ANNOUNCEMENT 181

NUMBER 2, SEPTEMBER 1, 1990

MARIA-ANGELICA DURAN, DIANE SPENCER, MANFRED WEISE, NOUHAD O. KRONFOL, ROBERT F. SPENCER, AND DONALD E. OKEN. Renal Epithelial Amino Acid Concentrations in Mercury-Induced and Postischemic Acute Renal Failure 183

STANLEY A. ROBERTS, VERONICA F. PRICE, AND DAVID J. JOLLOW. Acetaminophen Structure–Toxicity Studies: *In Vivo* Covalent Binding of a Nonhepatotoxic Analog, 3-Hydroxyacetanilide 195

GANFENG WANG AND NEILL H. STACEY. Elevation of Individual Serum Bile Acids on Exposure to Trichloroethylene or α-Naphthylisothiocyanate 209

HOWARD S. RAMSDELL AND DAVID L. EATON. Mouse Liver Glutathione *S*-Transferase Isoenzyme Activity toward Aflatoxin B_1-8,9-Epoxide and Benzo[*a*]pyrene-7,8-dihydrodiol-9,10-epoxide 216

ROGER S. JAENKE, BRUCE A. CUMMINGS, AND MARK E. CARTWRIGHT. Mesangial Macromolecular Uptake in Captopril-Treated Uninephrectomized Rats 226

LORI G. ROCHELLE, TERRY L. MILLER, AND LAWRENCE R. CURTIS. Chlordecone Impairs Na^+-Stimulated L-[^{3}H]Glutamate Transport and Mobility of 16-Doxyl Stearate in Rat Liver Plasma Membrane Vesicles 234

M. HARRIS, T. ZACHAREWSKI, J. PISKORSKA-PLISZCZYNSKA, R. ROSENGREN, AND S. SAFE. Structure-Dependent Induction of Aryl Hydrocarbon Hydroxylase Activity in C57BL/6 Mice by 2,3,7,8-Tetrachlorodibenzo-*p*-dioxin and Related Congeners: Mechanistic Studies 243

L. HOWIE, R. DICKERSON, D. DAVIS, AND S. SAFE. Immunosuppressive and Monooxygenase Induction Activities of Polychlorinated Diphenyl Ether Congeners in C57BL/6N Mice: Quantitative Structure–Activity Relationships 254

W. K. NICHOLS, D. N. LARSON, AND G. S. YOST. Bioactivation of 3-Methylindole by Isolated Rabbit Lung Cells 264

GARY R. KLINEFELTER, JOHN W. LASKEY, NAOMI R. ROBERTS, VALERIE SLOTT, AND JUAN D. SUAREZ. Multiple Effects of Ethane Dimethanesulfonate on the Epididymis of Adult Rats .. 271

PETER M. ANDREWS AND ELLEN M. CHUNG. High Dietary Protein Regimens Provide Significant Protection from Mercury Nephrotoxicity in Rats 288

TIMOTHY F. MCMAHON AND LINDA S. BIRNBAUM. Age-Related Changes in Toxicity and Biotransformation of Potassium Cyanide in Male C57BL/6N Mice 305

A. B. MAKAR, T. R. TEPHLY, G. SAHIN, AND G. OSWEILER. Formate Metabolism in Young Swine 315

D. B. PEELE, S. D. ALLISON, AND K. M. CROFTON. Learning and Memory Deficits in Rats following Exposure to 3,3′-Iminodipropionitrile 321

MAURA FLOREANI AND FRANCESCA CARPENEDO. Inhibition of Rat Liver Monooxygenase Activities by 2-Methyl-1,4-naphthoquinone (Menadione) 333

SHORT COMMUNICATIONS

STEPHEN R. THOM. Antagonism of Carbon Monoxide-Mediated Brain Lipid Peroxidation by Hyperbaric Oxygen 340

MARIA DEBIEC-RYCHTER AND CHING Y. WANG. Induction of DNA Synthesis by Sodium Phenobarbital, Uracil, and Sodium Saccharin in Urinary Bladder of the F344 Rat 345

ANNOUNCEMENT 350

NUMBER 3, SEPTEMBER 15, 1990

B. A. QUINN, T. L. CRANE, T. E. KOCAL, S. J. BEST, R. G. CAMERON, T. H. RUSHMORE, E. FARBER, AND M. A. HAYES. Protective Activity of Different Hepatic Cytosolic Glutathione *S*-Transferases against DNA-Binding Metabolites of Aflatoxin B_1 351

BILL J. SMITH, DEAN E. CARTER, AND I. GLENN SIPES. Comparison of the Disposition and *in Vitro* Metabolism of 4-Vinylcyclohexene in the Female Mouse and Rat 364

BILL J. SMITH, DONALD R. MATTISON, AND I. GLENN SIPES. The Role of Epoxidation in 4-Vinylcyclohexene-Induced Ovarian Toxicity 372

H. FOTH, U. I. WALTHER, AND G. F. KAHL. Increased Hepatic Nicotine Elimination after Phenobarbital Induction in the Conscious Rat 382

JOHN B. COLEMAN, ALESSANDRO F. CASINI, ADA SERRONI, AND JOHN L. FARBER. Evidence for the Participation of Activated Oxygen Species and the Resulting Peroxidation of Lipids in the Killing of Cultured Hepatocytes by Aryl Halides 393

Information for Authors

Toxicology and Applied Pharmacology publishes original scientific research pertaining to action on tissue structure or function resulting from administration of chemicals, drugs, or natural products to animals or humans. Manuscripts should address mechanistic approaches to physiological, biochemical, cellular, or molecular understanding of toxicologic/pathologic lesions and to methods used to describe these responses. Papers dealing with alternatives to the use of experimental animals are encouraged.

A limited number of short reviews on subjects of timely interest to toxicologists will be considered as part of the section on Contemporary Issues in Toxicology. Communications, Announcements, and Letters to the Editor are discussed below.

Manuscripts are accepted for review with the understanding that the same work has not been published, that it is not under consideration for publication elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; further, that any person cited as a source of personal communications has approved such citation.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Manuscript handling fee. The Society of Toxicology has established that a manuscript handling fee of $50.00, payable to the Society of Toxicology in United States currency, must accompany the original submission of the manuscript. The name(s) of the author(s) and the title of the manuscript must be included in the check identification information. In the event that this fee cannot be met by the authors or their institution, an explanatory letter must be sent to the Editor with the manuscript. The editorial decision regarding eventual acceptance or rejection of the manuscript will be independent of the submission of the handling fee.

Submission of manuscripts. All manuscripts should be submitted to: ***Toxicology and Applied Pharmacology*, Editorial Office, Seventh Floor, 1250 Sixth Avenue, San Diego, California 92101.**

Form of manuscript. Manuscripts should be submitted in quadruplicate (one original and three photocopies), in English, including four sets of figures. All copies of halftone photographs and electron micrographs *must* be glossy prints or originals; photocopies of halftones do not show sufficient detail to be used for the review process. Papers in French or German can be considered for publication: authors should contact the Editor prior to submission. All manuscripts must be typewritten, double-spaced (including references) on one side of 8.5 × 11 in. white paper with 1 in. margins on all sides. Dot matrix printers should not be used.

Page 1 should contain the article title, the names and affiliations of all authors, an abbreviated form of the title (not to exceed 40 characters including letters and spaces) and the name, telephone number, and complete mailing address of the person to whom all correspondence should be sent. The article title should be comprehensive and descriptive: proprietary names must not be used in titles, but may be identified in footnotes.

Page 2 should contain an abstract starting with the title of the paper, followed by the authors' names and reference to *Toxicology and Applied Pharmacology*; blanks should be left so that the Editor may fill in the volume and page numbers. The abstract will be limited to 250 words but must contain a concise summary of what was done, the results obtained, and valid conclusions which are drawn therefrom. It must mention the compounds or families of compounds studied, their actions, and the species of animals. It must contain important words which are used as index terms, but not proprietary names.

Example: Immunoperoxidase Localization of T-2 Toxin. Lee, S. C., Beery, J. T., and Chu, F. S. (1984). *Toxicol. Appl. Pharmacol.* **72,** 228–235.

Format. The following text sections should be used.

Introduction. State why the investigation was carried out, note any relevant published work, and delineate the objective of the investigation.

Methods. New methods or significant improvements of methods or changes in old methods must be described. Methods for which adequate reference can be cited are not to be described. In the Methods section, authors should draw attention to any particular chemical or biological hazards that may be involved in carrying out the experiments described. Any relevant safety precautions should be described: if an accepted code of practice has been followed, a reference to the relevant standards should be given. Details regarding animal housing conditions should be given.

Results. Duplication between the text of this section and material presented in tables and figures should be avoided. Tabular presentation of masses of negative data must be avoided and replaced with a statement in the text whenever possible. The statement must include (a) what was done, (b) how it was done, (c) how the data were analyzed, (d) a measure of variability, and (e) the significance of the result.

Discussion. This section must relate to the significance of the work to existing knowledge in the field and indicate the importance of the contribution of this study. Needless detailed recapitulation of the results must be avoided. Unsupported hypotheses and speculation should be omitted.

References. Names of authors are to be cited in the text with the year of publication in parentheses. When there are more than two authors use the first author's name followed by *et al.* All papers mentioned in the text must be listed in the reference list and vice versa. References should be listed alphabetically typed double-spaced on a separate sheet at the end of the paper with all authors included. Journal titles should be abbreviated according to *Chemical Abstracts Service Source Index,* 1985. Note the following styles for references.

Gerhart, J. M., Tilson, H. A., Hong, J. S., and Uphouse, L. L. (1983). Chlordecone-induced tremor: Quantification and pharmacological analysis. *Toxicol. Appl. Pharmacol.* **66,** 234–243.

Randall, C. (1977). Teratogenic effects of *in utero* ethanol exposure. In *Alcohol and Opiates* (K. Blum, Ed.), pp. 91–107. Academic Press, New York.

Cole, R. J., and Cox, R. H. (1981). *Handbook of Toxic Fungal Metabolites.* Academic Press, New York.

Footnotes should be identified in the text by superscript Arabic numerals and cited consecutively throughout the paper. All footnotes should be listed in order typed double-spaced on a separate sheet. Proprietary names of substances and names and addresses of suppliers should be identified in footnotes. If the paper has been presented orally in whole or in part, the date, and occasion should be included in a footnote.

Tables must be typed double-spaced on a separate sheet with the title typed directly above the table. Do not use abbreviations in the title. The title and footnotes must contain all the information necessary to understand and interpret the table without reference to the text. Tables must be numbered consecutively with Arabic numerals. Footnotes to tables should be identified by superscript lowercase letters ^{a,b} etc., and placed at the bottom of the page containing the table. Letters should be assigned to table footnotes alphabetically in order of appearance as the table is read *horizontally,* not vertically.

Figures should be numbered consecutively with Arabic numerals. All legends are to be typed consecutively on a separate sheet. All figures should be planned to fit the proportions of the printed page (5.5 × 8 in.; column width, 2.5 in.); wherever possible, figures will be reduced to single-column width. Lettering on the original figure should be large enough to be legible after reduction of the figure to single-column width (approximately 50 to 60%). *Differences in type size within a single figure should be no more than approximately 15%.* Standard mechanical lettering sets should be used. Characters should be approximately 3/16-in. high (Leroy lettering size 140). *In addition, symbols used to identify points within a graph should be large enough that they will be easily distinguishable after reduction.* Graphs should be plotted with black India ink on white paper no larger than 8.5 × 11 in. Grid lines that are to show must be inked in black.

All copies of halftone photographs and electron micrographs *must* be glossy prints or originals; photocopies of halftones do not show sufficient detail to be used for the review process. Photographs must be kept to a minimum. Photographs should be glossy prints (5 × 7 or 8 × 10 in.). Overlays indicating the parts of the electron micrographs that are to be emphasized must be used. Electron micrographs should be submitted not larger than 6.5 × 4.5 in. Magnifications should be indicated in the figure legends. Illustrations in color can be accepted only if the authors defray the cost.

Identify all figures on the back, in *pencil,* with authors' names and figure number, and indicate the TOP.

Index terms suitable for use in the subject index must be submitted on a separate sheet. The list should include chemical name, generic name, common name, and may include proprietary name of each important substance used in the experiments. It should also include biological activity of each substance investigated. Terms should elucidate important relationships.

Nomenclature. For styling of isotope, enzyme, and biochemical nomenclature, consult the Information for Authors of the *Archives of Biochemistry and Biophysics.*

Abbreviations. Units will be in general accordance with the International System (SI) as adopted by the 11th General Conference on Weights and Measures. Periods are not used after abbreviations (note exceptions, e.g. in. for inches).

Common abbreviations to be used in this journal are:

m	meter	M	molar	ip	intraperitoneal
cm	centimeter	mM	millimolar	iv	intravenous
mm	millimeter	μM	micromolar	po	oral
μm	micrometer	N	normal	LD50	median lethal dose
nm	nanometer	Ci	Curie	LC50	medial lethal concentration
kg	kilogram	$\bar{x}$	mean	Hz	hertz
g	gram	ppm	parts per million	°C	centigrade
mg	milligram	cpm	counts per minute	sec	seconds
μg	microgram	dpm	disintegrations per minute	min	minutes
ng	nanogram	sc	subcutaneous	hr	hours
ml	milliliter	ic	intracutaneous	SD	standard deviation
μl	microliter	im	intramuscular	SE	standard error
mol	mole			TLV	threshold limit value

Reprints. A reprint order form will accompany the proofs. Fifty reprints of each article (without covers) are supplied free of charge.

Communications. *Toxicology and Applied Pharmacology* will accept a limited number of brief reports of work that has progressed to the stage at which it is considered that the science of Toxicology would be advanced if the results were made available as soon as possible. These reports will be designated "Communications." Authors should submit short papers for this category of publication only when they believe that the rapid communication of the results is of the utmost importance to other investigators. The manuscript must be submitted in quadruplicate and conform strictly to the form and style of the journal. The length must be such that it will require no more than four pages in the present format of the journal, approximately 2500 words total.

Letters to the Editor. Letters to the Editor will be accepted for publication subject to Editorial Board approval, provided that the content deals with papers published in *Toxicology and Applied Pharmacology* and that the comments are of scientific value. Letters should be received within two months of mailing of the journal and should be no longer than 250 words. Introduction of new data will not be permitted. Each letter will be submitted to the author of the original paper in order that any reply may be published simultaneously with the letter.

Announcements: *Toxicology and Applied Pharmacology* will accept for publication announcements of interest to toxicologists such as notices of society meetings, symposia, or other matters.

For information about advertising in *Toxicology and Applied Pharmacology*, please write to Julie Davis, Advertising Coordinator, Academic Press, Inc., Journal Promotion Department, 1250 Sixth Avenue, San Diego, California 92101 (fax: (619) 699-6800).
